

GDSspecials

Design · Build · Implement

Straight forward thinking

Ely interactive sluice:

Ely sluice has direct connection to the environment agency and monitors the water level of the real local sluices. A computer controls coloured lighting and video on the front and back plasma screens depending on data from the environment agency.

Construction:

Seam welded, mirror finish stainless steel.

Internally air conditioned

Heated vandal resistant screen covers

Fully IP rated.

Wireless 3G Data connection

Artist: Lulu Quinn

GDSspecials |

GDSspecials design, build and manage all aspects of bespoke projects from Theatre, Television, Film, and corporate. The GDSspecials team is formed from industry experts in the art of creating and delivering reliable one offs and short run products. Using 3D CAD and rendering, the project can be formed, evaluated and changed as required before anything is physically built, saving clients time and money.

GDS has an extensive research and development program for its normal product manufacturing, a useful resource for fast proof of concept such as electronics, software or physical testing. Newly created workshops have a large capacity, with access to skilled engineers and technicians for the final build.

Working with trusted installation partners, GDSspecials division can produce exquisite installation projects from giant interactive sculptures to lighting design schemes.

The GDSspecials team are all industry experienced engineers, who understand the meaning of delivering to a deadline. All disciplines are in house ensuring good communication and efficient project completion.

Build · Install

Design

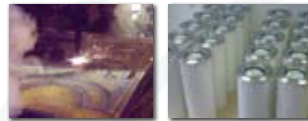

Delivering a custom project of any size requires good design. GDSspecials design engineers have considerable experience within the entertainment and installation sector. 3D CAD and rendering systems allow each project to be virtually tested to resolve any problems and reduce delays in project delivery.

With each designer specialising in a specific discipline, the team as a whole form a powerful design entity that can create, reliable, well designed projects extremely fast.

Production

GDSspecials has a newly expanded facility for all types of projects from small control units to large set pieces. Our technicians and engineers undergo strict quality control training ensuring all aspects of the project are considered prior to shipping or installation.

Project creation is aided by newly installed production equipment, further increasing efficiencies to achieve tight deadlines.

Implement

Our manufacturing experience is put to good use with GDS specials. We are able to supply each custom project designed, tested and delivered on time. Resource sharing with the GDS group results in reacting fast when working with limited timescales.

Working with trusted installation partners, GDS can design and project manage your specialist requirement, ensuring clear and simple communication between all contractors.

The GDSspecials team:

At GDSspecials we are passionate about delivering your ideas. We enjoy our work and this shines through on the quality and design ability of each and every project we create.

Our diverse team have many years experience in just about every area of creation of an idea. We strive to design not only the best solution, but make it the most efficient way we can, making savings for you and the environment we live in.

We have every creation discipline in house working together to come up with your solutions. Bespoke projects don't have any room for error, which is why we spend a lot of our time removing it!
