

# CONCEPT 2

The next generation prompt desk for innovative professional control

## Concept 2 is...

- Ergonomic
- Low profile design
- Height adjustable
- Width scalable
- DSE compliant
- Fully configurable

## Typical Applications:

- Theatre and Auditorium
- Touring shows
- Concert Halls
- Educational spaces
- Professional venues

Offering a new way of thinking for stage and venue control, Concept 2's clever operation has been designed for practical everyday use.

Following intensive stages of research and design, our in-house team of designers and engineers took the opportunity to understand how the industry currently approached this complicated piece of equipment and what can be done to improve its usability.

In a progressive move for prompt desk manufacture, we worked with the SMA and listened to stage managers across the UK, to develop valuable user benefits, through continuous feedback and consultation.

A complete rework of the prompt desk as we know it, we believe the Concept 2 will greatly improve the future working environment for DSMs worldwide.

Conforming to DSE regulations and aligned ergonomic support, Concept 2 is completely height adjustable and width scalable, ensuring a reduced risk of muscle strain and over stretching.

Mimicking the seating position of modern offices and H&S compliant workstations, the Concept 2 can adapt to your performance requirements, with control buttons positioned at a reduced operating angle, reducing wrist fatigue.

Monitors are positioned at a natural viewing height, eliminating the common issue of neck and shoulder tensions. The improved natural angle now provides a clear line of sight for the operator, avoiding the need to continuously turn the head and monitor live action during a performance.

Light weight and adaptable, the Concept 2 can be fully customised to work effectively in your space, with a variety of professional show communication features to choose from:

- Intercom
- 4K Monitors
- Cue System
- Paging System
- NTP time synced clocks and timing function
- Fully configurable buttons
- Dimmable task lighting
- Desk storage

As the latest addition to the SM Console range, the next generation Concept 2 delivers high performance output and retains 3rd party integration, without compromising on equipment positioning, function or user comfort.
